Le coefficient α_s exprime l'absorption de l'énergie sonore par la cloison de 0 à 1 (0 à 100%). Dans les bureaux, les fréquences se situent généralement entre 500 et 4000 Hertz (sons graves ou aigus). Le coefficient α_w exprime l'absorption acoustique pondérée.

The α_s coefficient is used to describe the partition's sound absorption on a scale from 0 to 1 (0 to 100%). In offices, these levels generally remain between 500 and 4000 Hertz (low- or high-pitched sounds). The α_w coefficient describes the weighted acoustic absorption.

Der Koeffizient α_s gibt die von der Trennwand absorbierte Schallenergie von 0 bis 1 (0 bis 100%) an. In Büros liegen die Frequenzen in der Regel zwischen 500 und 4000 Hertz (tiefe oder hohe Töne). Der Koeffizient α_w gibt den gewichteten Schallabsorptionsgrad an.
